Healthcare Costs

Total Health Expenditure per Capita and GDP per Capita 2008

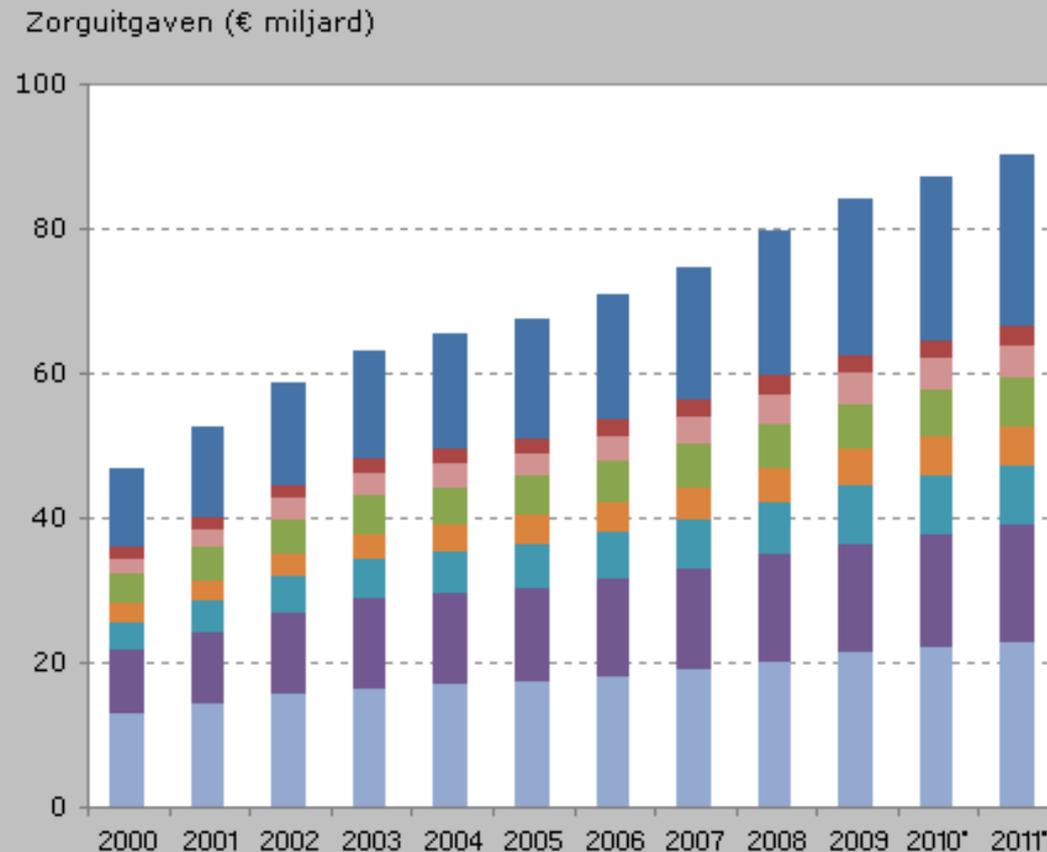

Source: Organisation for Economic Co-operation and Development (2010), "OECD Health Data", *OECD Health Statistics* (database). doi: 10.1787/data-00350-en

Costs are Rising!!

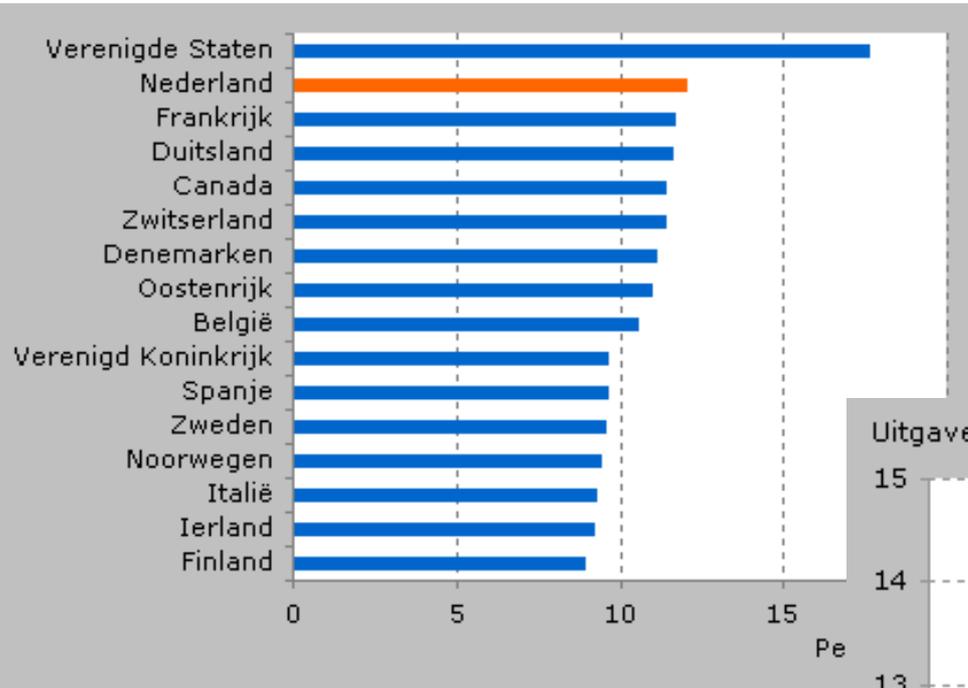

Gemiddelde jaarlijkse reële uitgavengroei per inwoner (%), 2000-2008 (Bron: OECD Health Data, 2010)a

Zorguitgaven per sector, € miljard, 2000-2011 (Bron: CBS Statline, 2011ba; CBS, 2012).

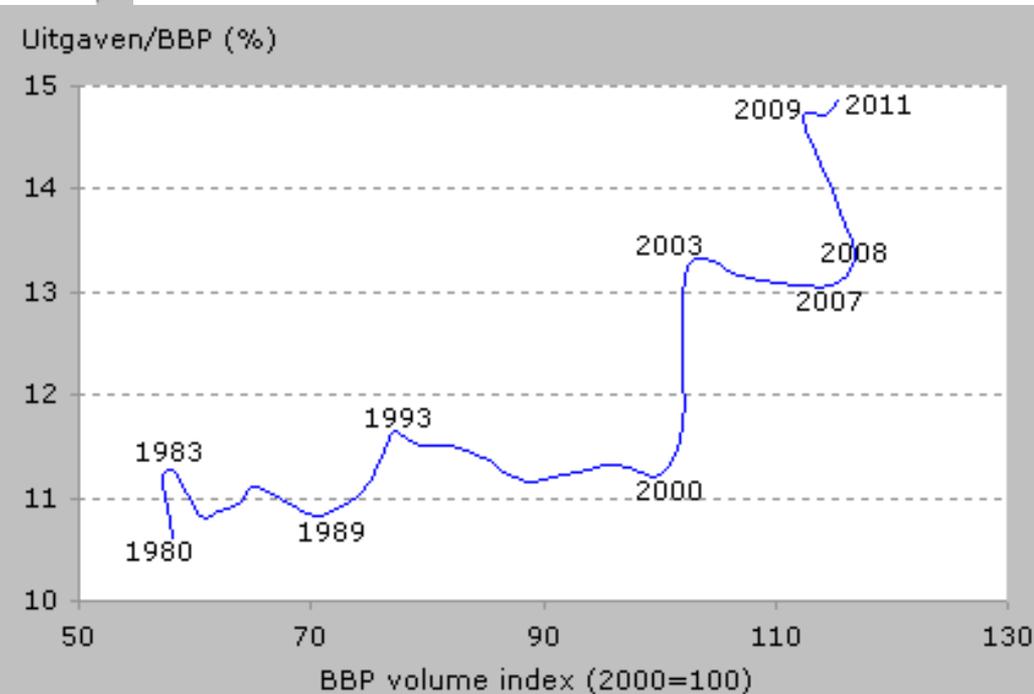

- Overig
- Gehandicaptenzorg
- Geneesmiddelen
- Huisartsen
- Ouderenzorg
- Geestelijke gezondheidszorg
- Paramedici en tandartsen
- Ziekenhuizen

Healthcare costs as a percentage of the Gross Domestic Product (GDP)

Aandeel zorguitgaven in het bruto binnenlands product, 2010 (Bron: OECD Health Data, 2012).

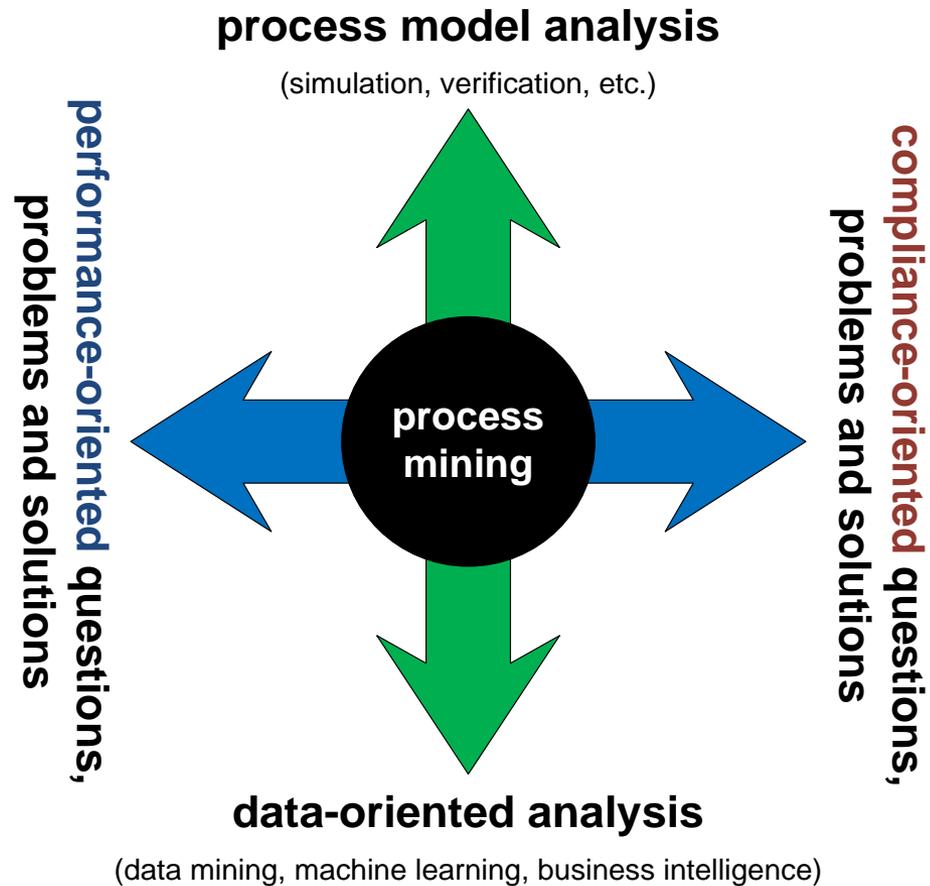

Aandeel zorguitgaven in het bruto binnenlands product afgezet tegen het bbp volume (2000=100) (%), 1980-2011 (Bron: CBS Statline, 2009c; CBS Statline, 2011b; OECD Health Data, 2009; databewerking RIVM).

Process Mining in Healthcare

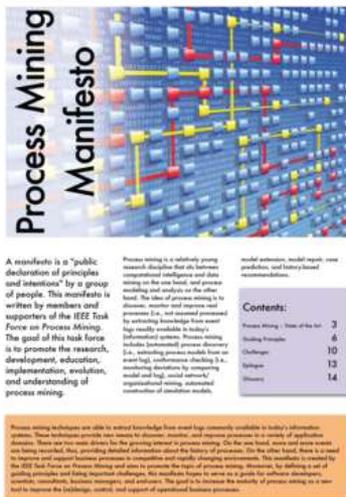

- Show the actual care processes (rather than idealized or assumed ones) and provide insights
- Uncover bottlenecks in care processes
- Show deviations from the “happy path”
- Performance and compliance analyzed in a unified, evidence-based, manner
- Provide operational support: predicting problems and recommending actions
- From “politics” to “analytics” to avoid “management by PowerPoint” and the usual “IT disasters”
- **Improve service and reduce costs in healthcare**

Positioning Process Mining

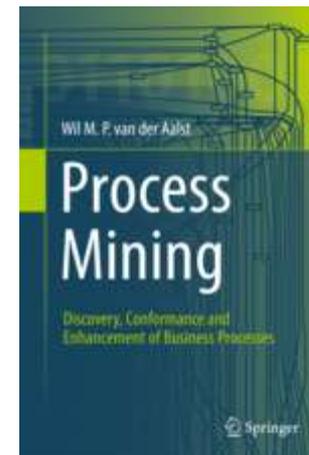

Advances in Process Mining

- Many process discovery and conformance checking algorithms and tools are available (cf. the various **ProM** packages).
- Also commercial software based on these ideas:
Disco (Fluxicon), Reflect (Futura/Perceptive), BPMOne (Pallas Athena/Perceptive), ARIS Process Performance Manager (Software AG), Interstage Automated Process Discovery (Fujitsu), QPR ProcessAnalyzer/Analysis (QPR Software), flow (fourspark), Discovery Analyst (StereoLOGIC), etc.
- We applied process mining in over 100 organizations.

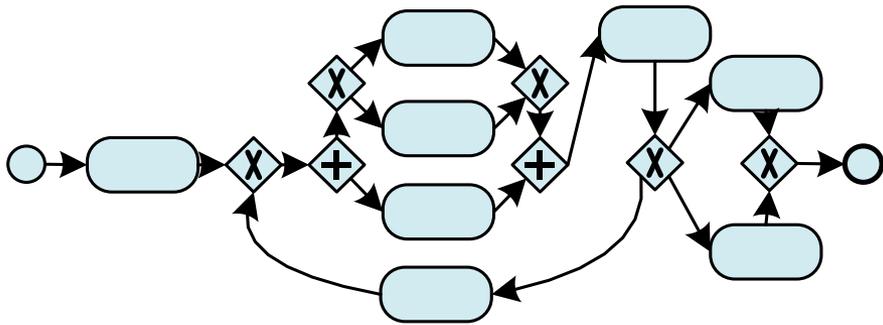

More than 75 people involving more than 50 organizations created the **Process Mining Manifesto** in the context of the **IEEE Task Force on Process Mining**.

Studenten-Café

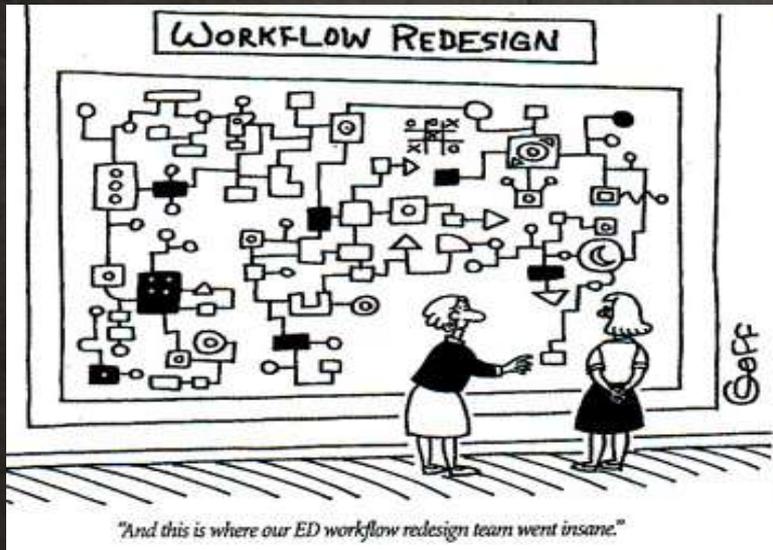

A simple calculation

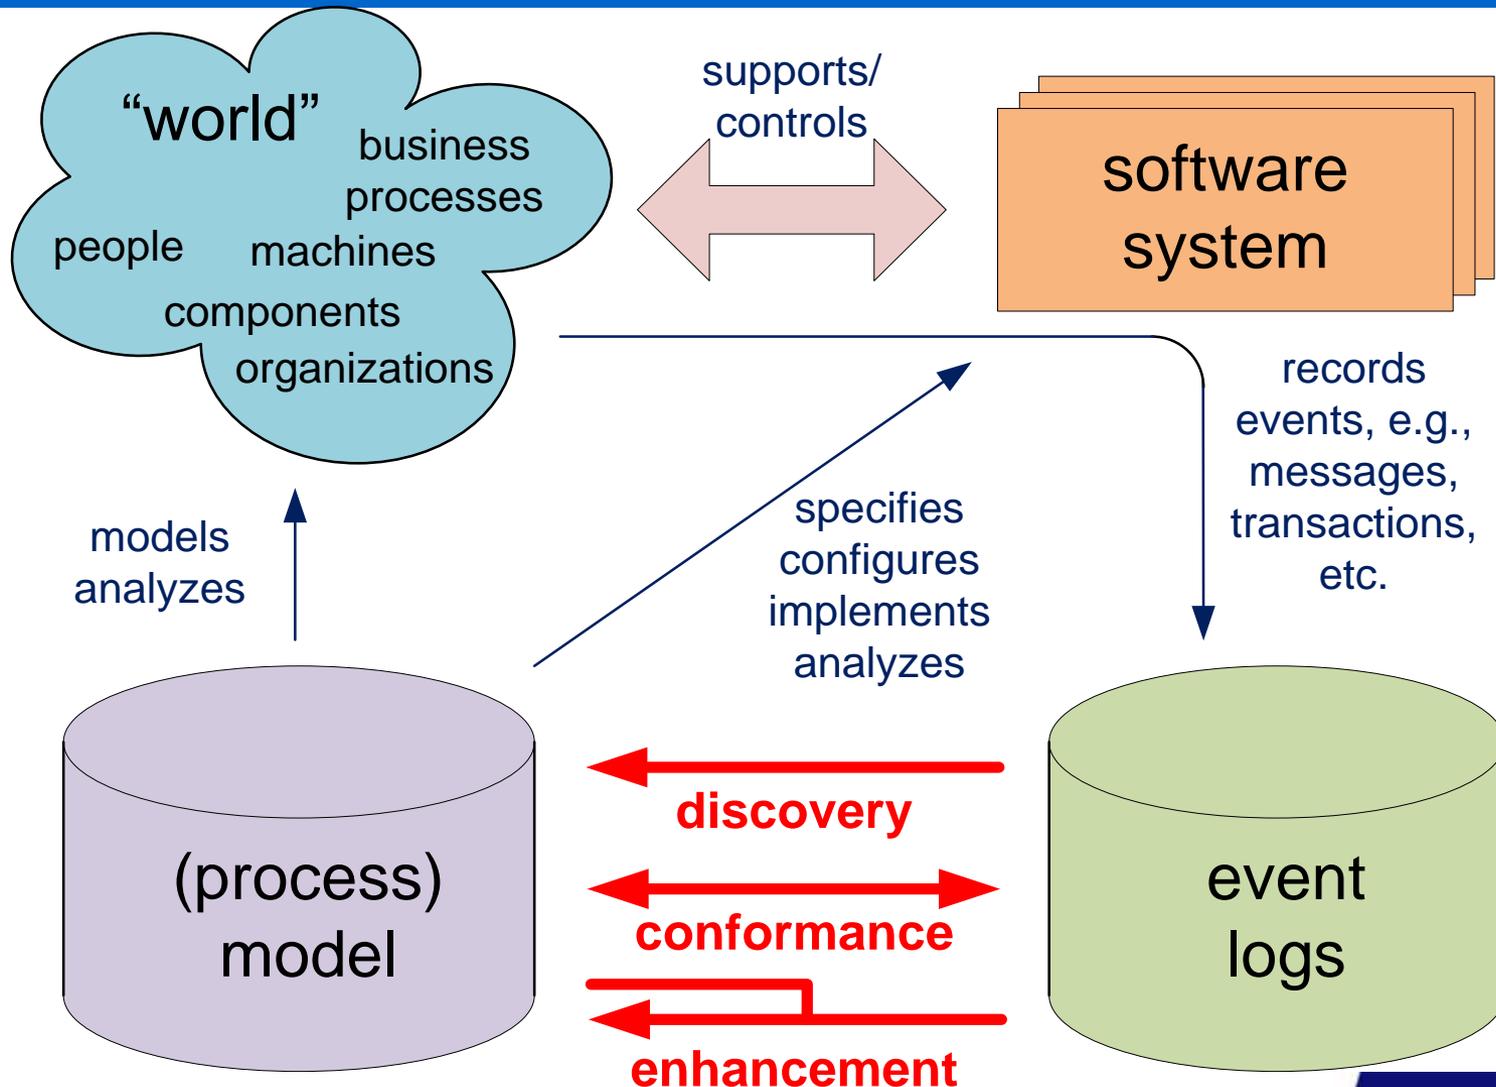

- **Starting point 2010:**
 - **Harddisk 1 Terabyte = 10^{12} bytes**
 - **Digital Universe 1.2 Zettabyte = $1.2 \cdot 10^{21}$ bytes** (estimate in IDC's annual report, "The Digital Universe Decade – Are You Ready?" May 2010)
- **Disk needs to grow $2^{30.16} = 1.2 \cdot 10^9 = 1.2 \cdot 10^{21} / 10^{12}$ times its current size.**
- **Assuming $D=1.56$ this takes $30.16 \cdot 1.56 = 47.05$ years.**
- **Hence, in 2060 your laptop can contain all of today's digital universe (internet, computer files, transaction logs, movies, photos, music, books, databases, etc.)!**

Extension: Adding perspectives to model based on event log

The event log can be used to discover roles in the organization (e.g., groups of people with similar work patterns). These roles can be used to relate individuals and activities.

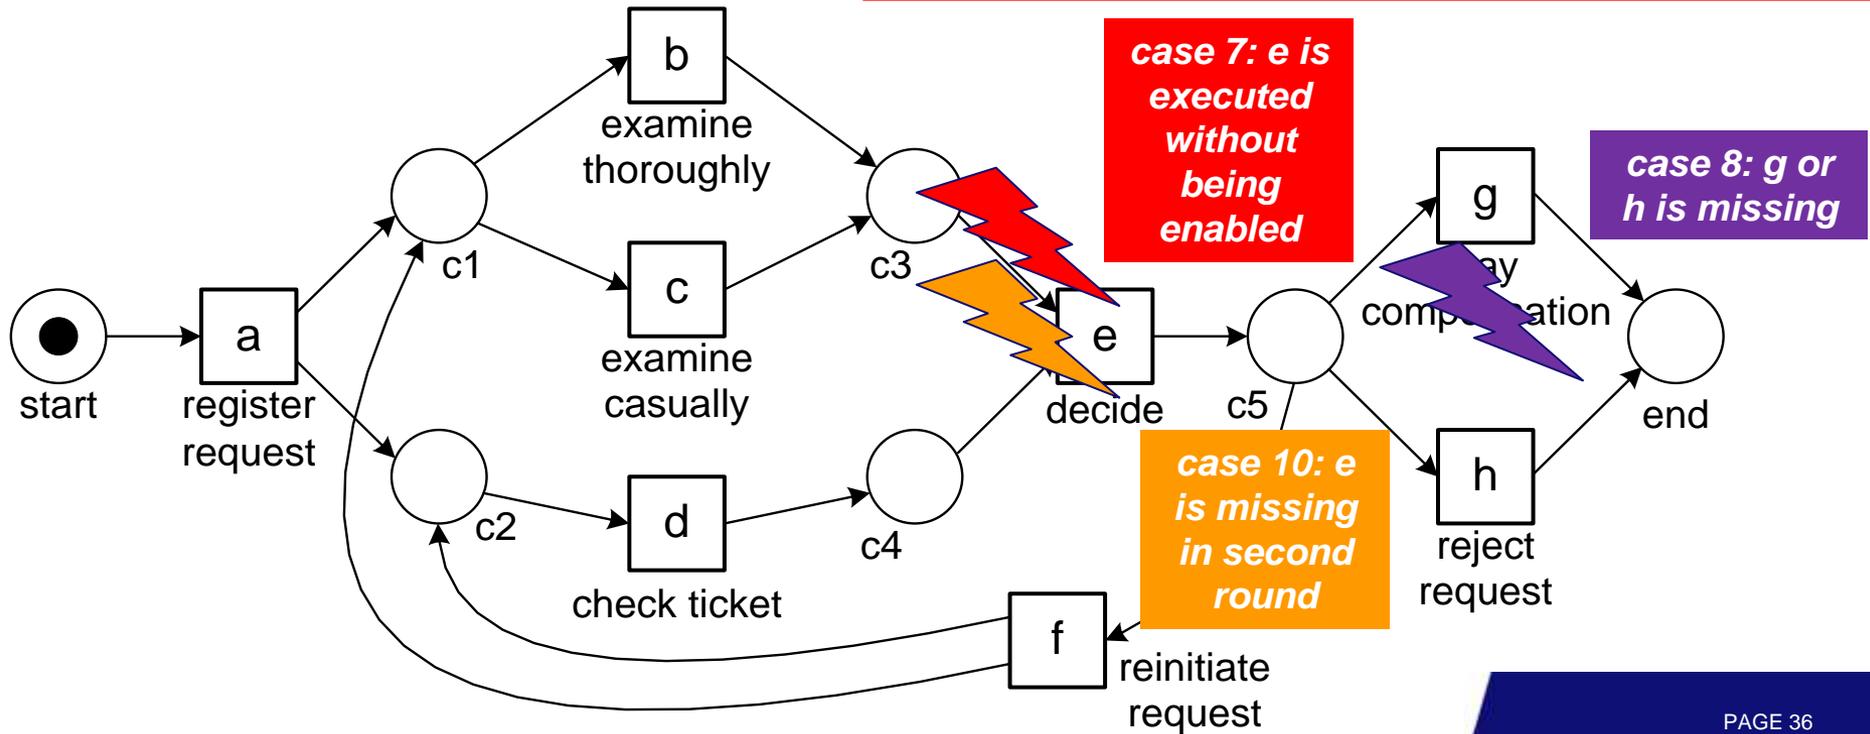

Performance information (e.g., the average time between two subsequent activities) can be extracted from the event log and visualized on top of the model.

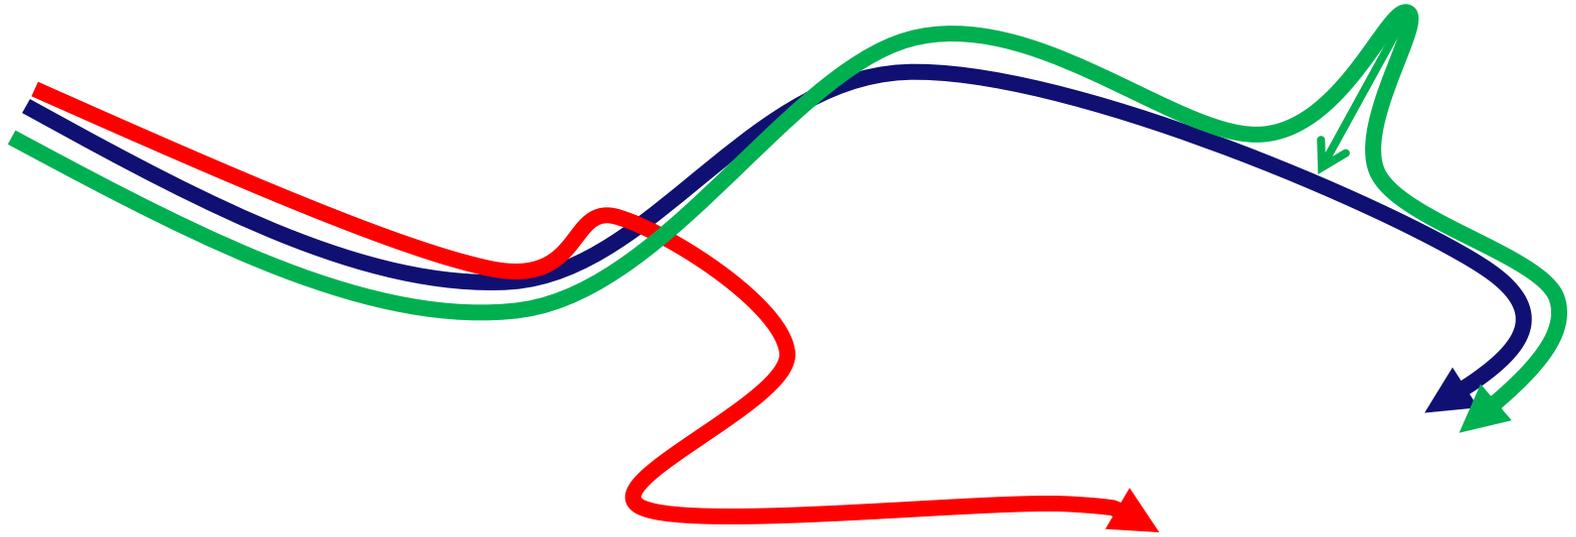

Decision rules (e.g., a decision tree based on data known at the time a particular choice was made) can be learned from the event log and used to annotated decisions.

Conformance checking

Food for Thought

We applied ProM in >100 organizations

- **Municipalities** (e.g., Alkmaar, Heusden, Harderwijk, etc.)
- **Government agencies** (e.g., Rijkswaterstaat, Centraal Justitieel Incasso Bureau, Justice department)
- **Insurance related agencies** (e.g., UWV)
- **Banks** (e.g., ING Bank)
- **Hospitals** (e.g., AMC hospital, Catharina hospital, azM hospital, Isala clinics, GGzE)
- **Multinationals** (e.g., DSM, Deloitte)
- **High-tech system manufacturers and their customers** (e.g., Philips Healthcare, ASML, Ricoh, Thales)
- **Media companies** (e.g. Winkwaves)
- ...

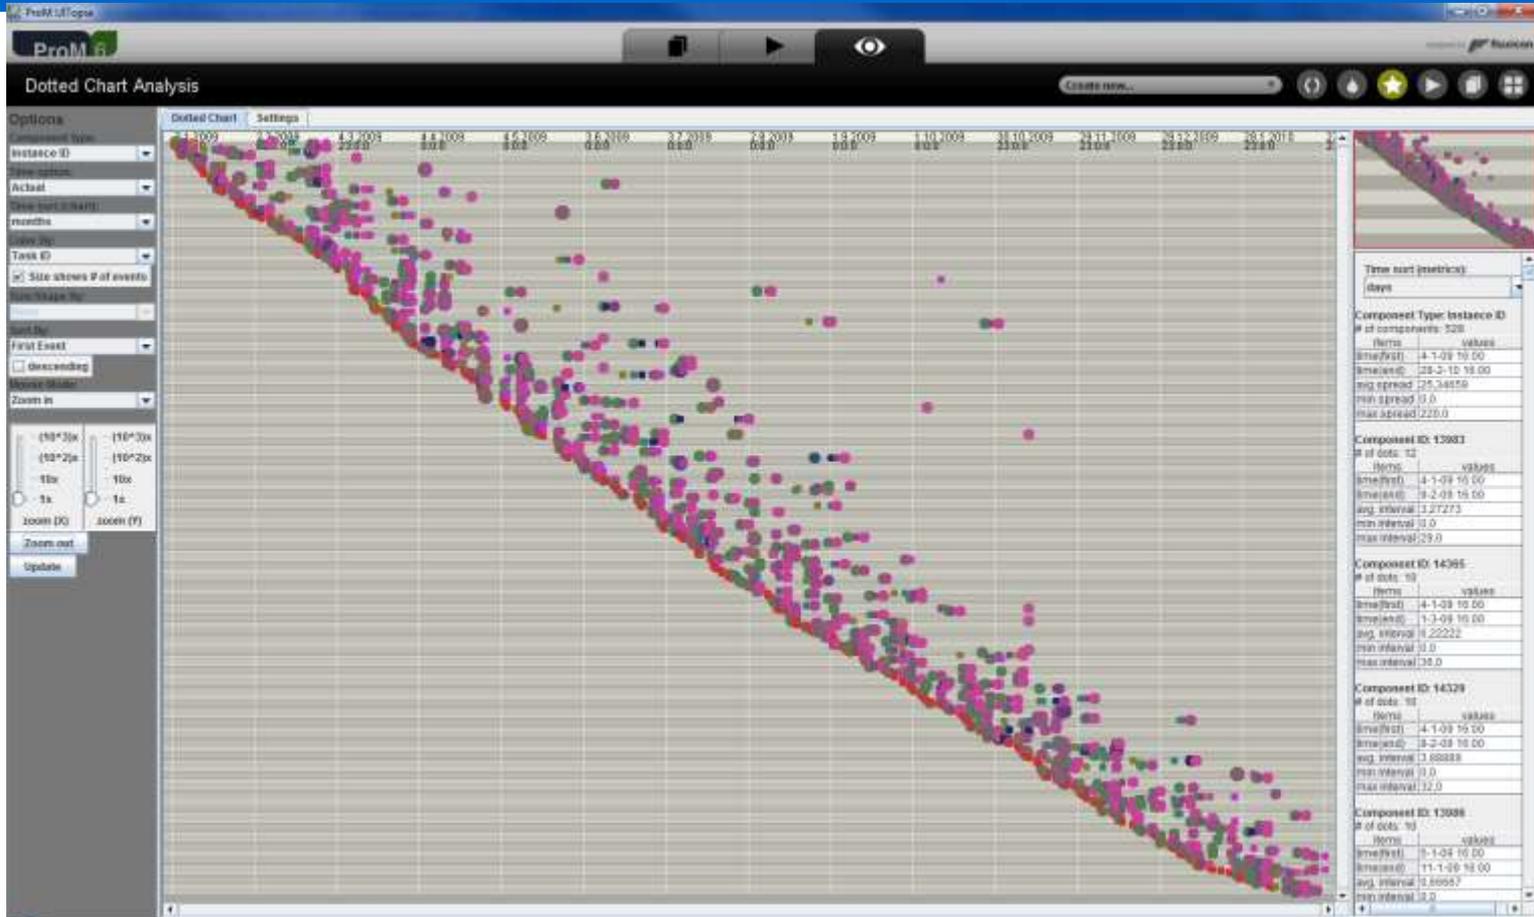

How can process mining help?

- **Uncover bottlenecks**
- **Detect deviations**
- **Performance measurement**
- **Auditing/compliance**
- **Business Process Redesign (BPR)**
- **Continuous improvement (Six Sigma)**
- **Operational support (e.g., recommendation and prediction)**

- **Provide new insights**
- **Highlight important problems**
- **An organization's mirror (in two ways)**
- **Helps to avoid ICT failures**
- **Avoid "management by PowerPoint"**
- **From "politics" to "analytics"**

Example of a Lasagna process: WMO process of a Dutch municipality

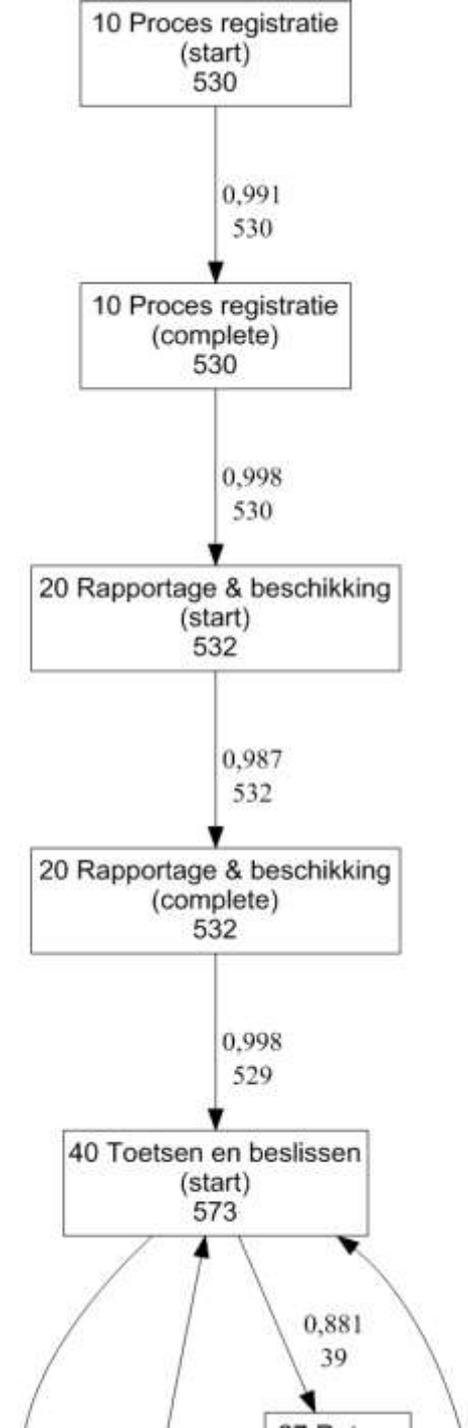

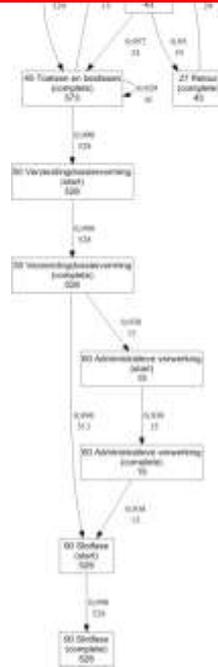

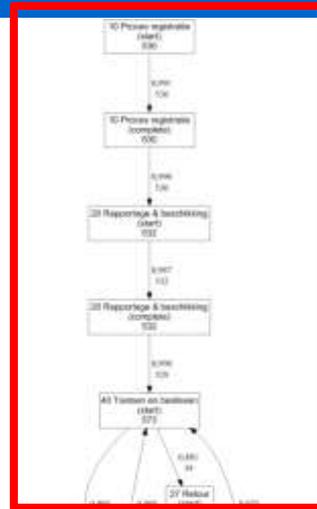

Each line corresponds to one of the 528 requests that were handled in the period from 4-1-2009 until 28-2-2010. In total there are 5498 events represented as dots. The mean time needed to handle a case is approximately 25 days.

WMO process

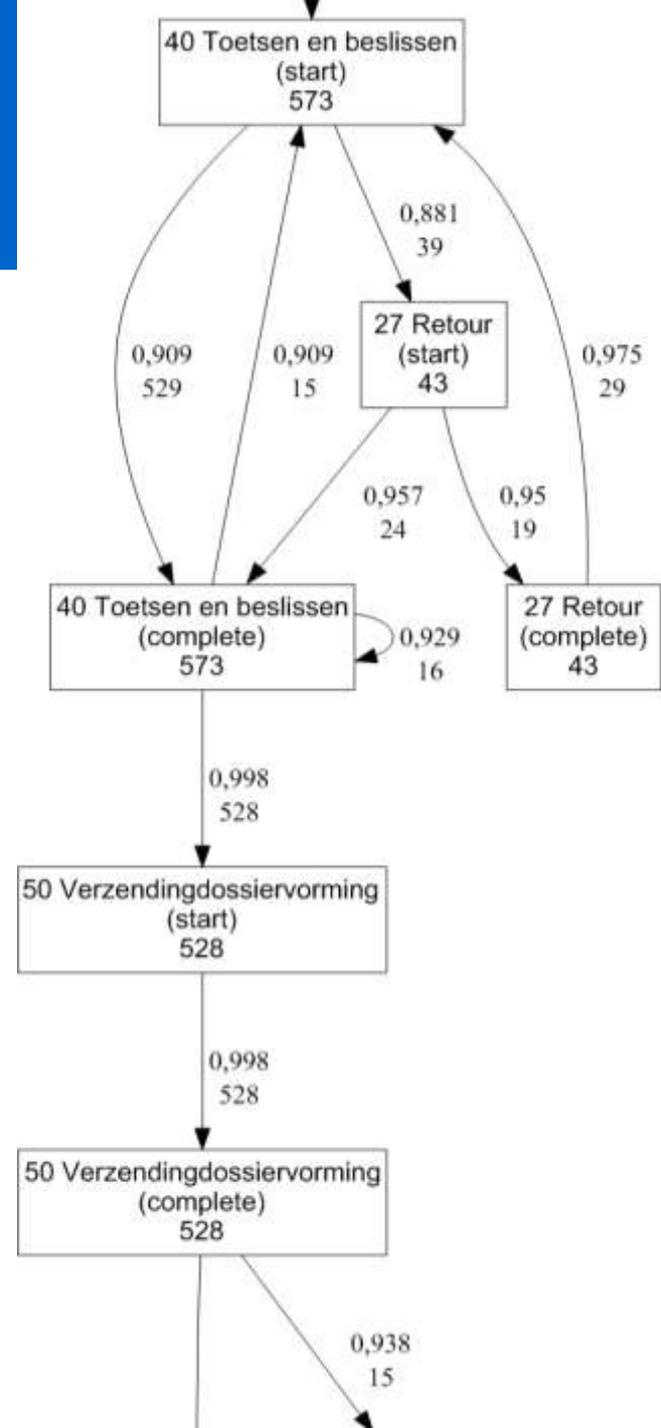

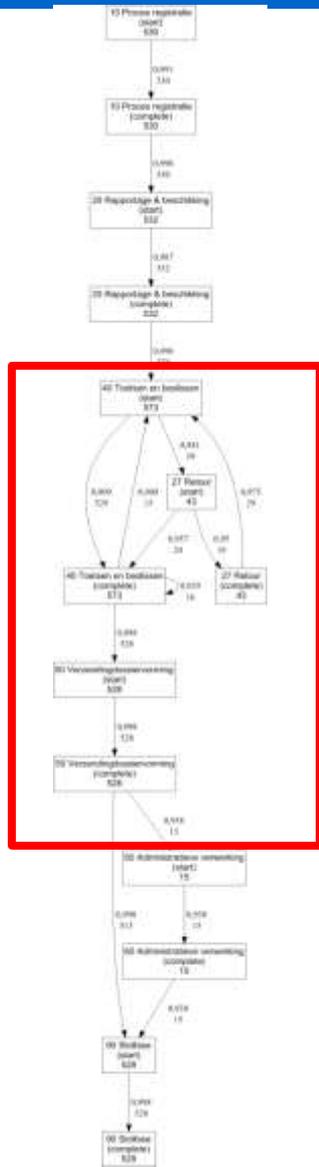

(Wet Maatschappelijke Ondersteuning)

- **WMO refers to the social support act that came into force in The Netherlands on January 1st, 2007.**
- **The aim of this act is to assist people with disabilities and impairments. Under the act, local authorities are required to give support to those who need it, e.g., household help, providing wheelchairs and scootmobiles, and adaptations to homes.**
- **There are different processes for the different kinds of help. We focus on the process for handling requests for household help.**
- **In a period of about one year, 528 requests for household WMO support were received.**
- **These 528 requests generated 5498 events.**

(relative)

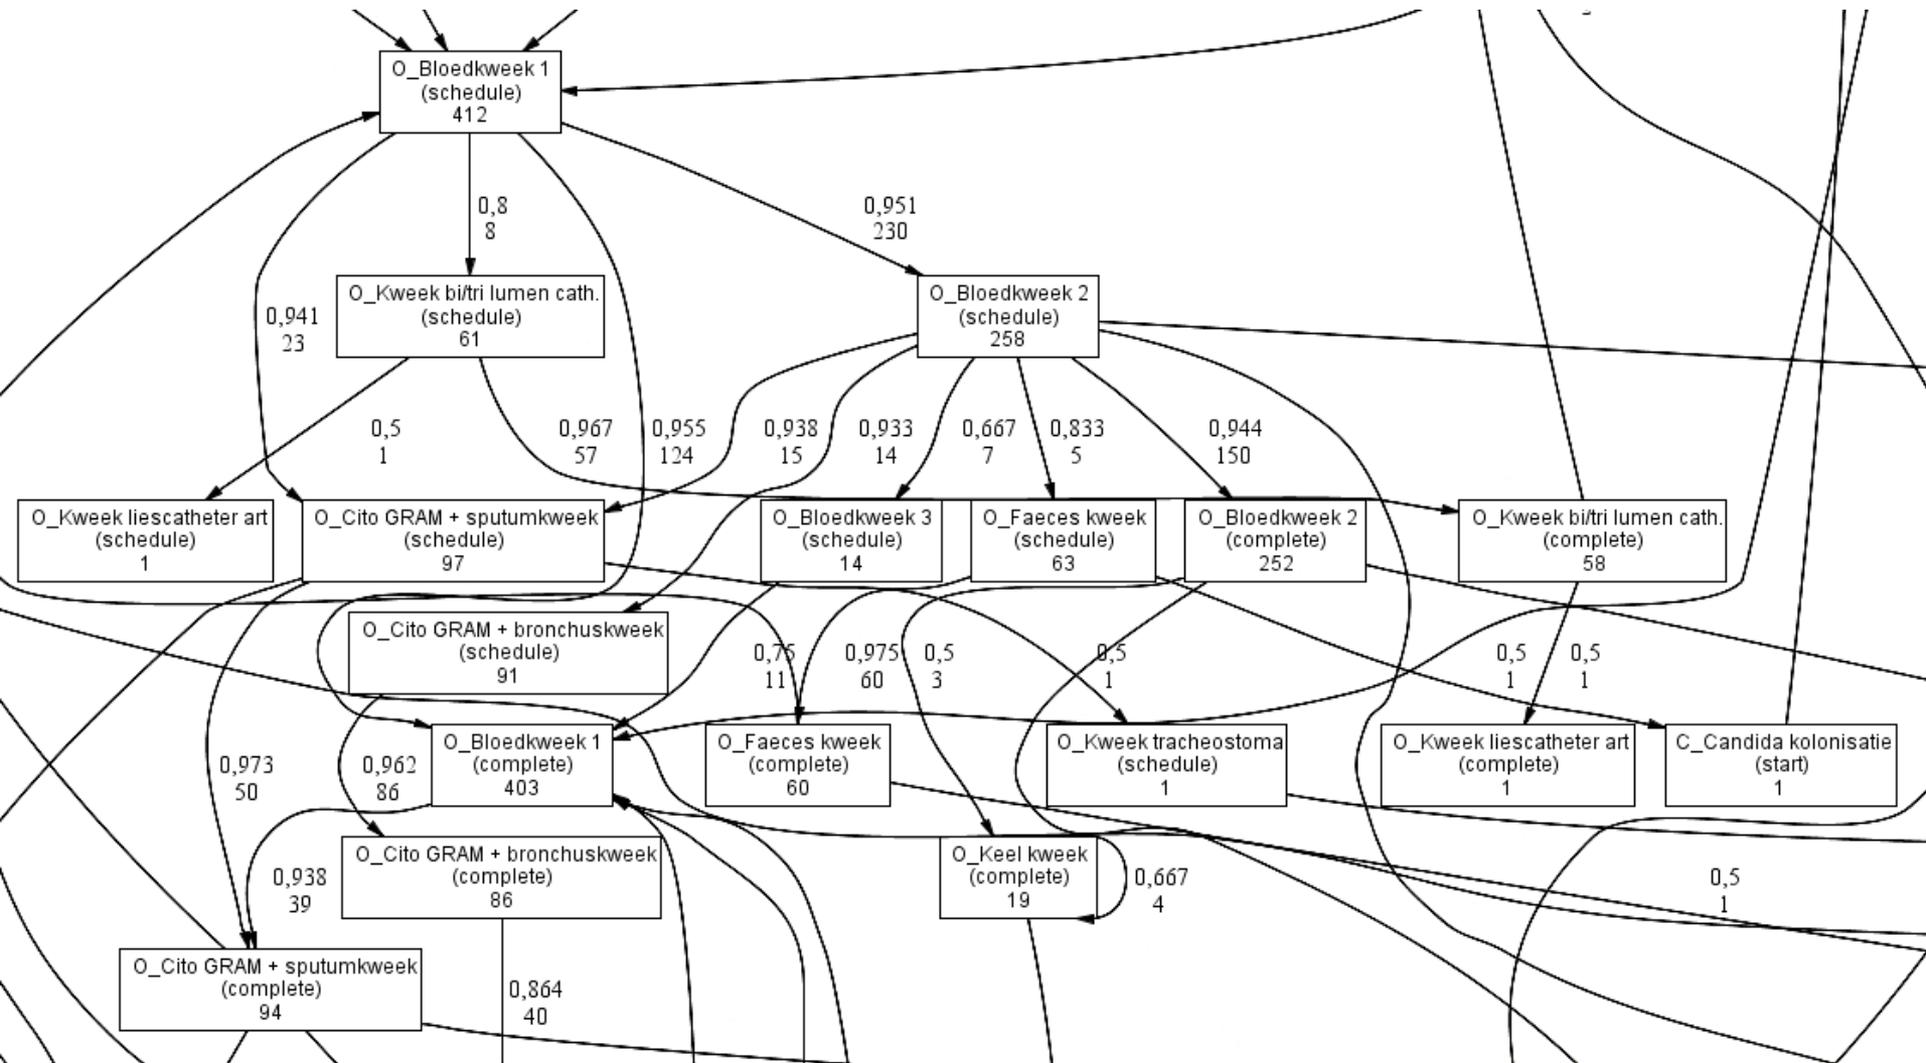

Example of a Spaghetti process

Spaghetti process describing the diagnosis and treatment of 2765 patients in a Dutch hospital. The process model was constructed based on an event log containing 114,592 events. There are 619 different activities (taking event types into account) executed by 266 different individuals (doctors, nurses, etc.).

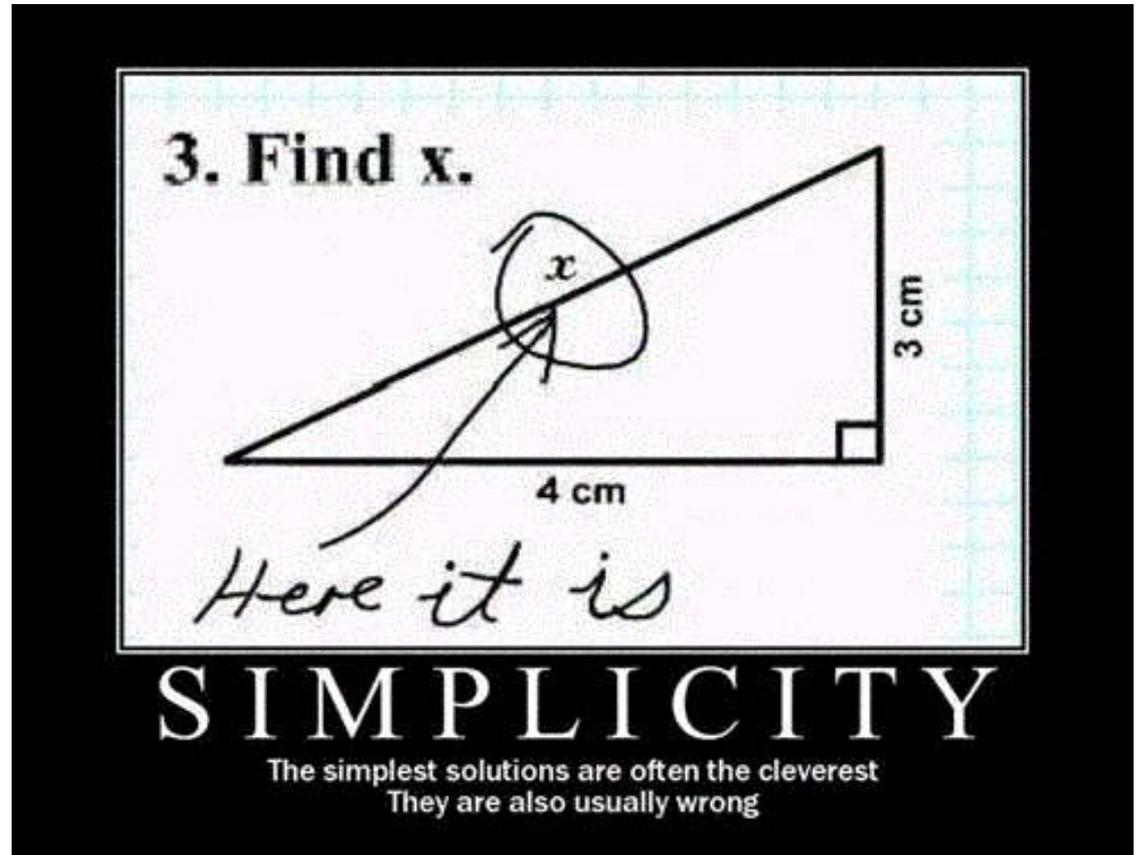

Fragment

18 activities of the 619 activities (2.9%)

Don't oversimplify

- Reality cannot adequately be described using a simple PowerPoint
- Healthcare cannot be supported by simple logistical principles and mechanistic IT solutions

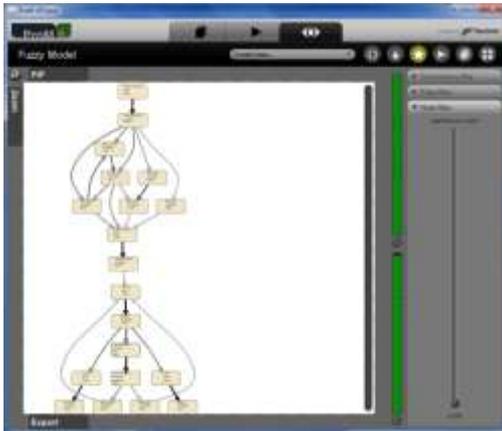

How to get started?

Hundreds of plug-ins available covering the whole process mining spectrum

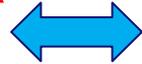

open-source (L-GPL)

Download from: www.processmining.org

How to Get Started?

Collect event data

- Minimal requirement: events referring to an activity name and a process instance.
- Good to have: timestamps, resource information, additional data elements.
- Challenges: scoping and sometimes correlation.

Collect questions

- What kind problems would you like to address (cost, time, risk, compliance, service, etc.)?
- Related to discovery, conformance, enhancement?
- Iterative process: can be “curiosity driven” initially.

Conclusion

Wil M. P. van der Aalst
Process Mining

Discovery, Conformance and Enhancement of Business Processes

More and more information about business processes is recorded by information systems in the form of so-called "event logs." Despite the omnipresence of such data, most organizations diagnose problems based on fiction rather than facts. Process mining is an emerging discipline based on process model-driven approaches and data mining. It not only allows organizations to fully benefit from the information stored in their systems, but it can also be used to check the conformance of processes, detect bottlenecks, and predict execution problems.

Wil van der Aalst delivers the first book on process mining. It aims to be self-contained while covering the entire process mining spectrum from process discovery to operational support. In Part I, the author provides the basics of business process modeling and data mining necessary to understand the remainder of the book. Part II focuses on process discovery as the most important process mining task. Part III moves beyond discovering the control flow of processes and highlights conformance checking, and organizational and time perspectives. Part IV guides the reader in successfully applying process mining in practice, including an introduction to the widely used open-source tool ProM. Finally, Part V takes a step back, reflecting on the material presented and the key open challenges.

Overall, this book provides a comprehensive overview of the state of the art in process mining. It is intended for business process analysts, business consultants, process managers, graduate students, and BPM researchers.

Features and Benefits:

- First book on process mining, bridging the gap between business process modeling and business intelligence.
- Written by one of the most influential and most-cited computer scientists and the best-known BPM researcher.
- Self-contained and comprehensive overview for a broad audience in academia and industry.
- The reader can put process mining into practice immediately due to the applicability of the techniques and the availability of the open-source process mining software ProM.
